

Release Notes

IntelliStitch Pro Version 3.0 (build#: 3.0.0.6)

(please read this first)

This software is a new version of IntelliStitch Pro Ver.3.0, embroidery design automation software. Below is a summary of what has been changed and added in this new version compared to the previous version of IntelliStitch Pro (version 2.1 build#:2.1.1.5).

Before installing this software, it is recommended that any previous version of IntelliStitch PRO 3.0 be uninstalled from your system first (via Control Panel|Add/Remove Programs). However, previous versions of IntelliStitch STANDARD (e.g. version 1.7) do *not* need to be uninstalled and may still be used after installing the PRO version.

This version includes various bug fixes and enhancements as reported and suggested by users. A partial list of these items is listed below:

1. Add Print-To-Stitch feature (custom printer driver) allowing printing of vector files directly to IntelliStitch.
2. Designed for Windows XP program compliance.
3. Added feature to remember last used brush or line widths
4. Changed isf file format
5. JPG added to graphic import dialog box filter.
6. Fixed bug that could occur when deleting or editing certain edge points.
7. Improved import support for Windows Metafiles (.wmf, .emf files).
8. Various other minor bug fixes.
